

Simplified Movies Controller without JSON processing

```
class MoviesController < ApplicationController
  # GET /movies
  def index
    @movies = Movie.all
  end

  # GET /movies/1
  def show
    @movie = Movie.find(params[:id])
  end

  # GET /movies/new
  def new
    @movie = Movie.new
  end

  # GET /movies/1/edit
  def edit
    @movie = Movie.find(params[:id])
  end

  # POST /movies
  def create
    @movie = Movie.new(params[:movie])
    if @movie.save
      redirect_to @movie, notice: 'Movie was successfully created.'
    else
      render action: "new"
    end
  end

  # PUT /movies/1
  def update
    @movie = Movie.find(params[:id])
    if @movie.update_attributes(params[:movie])
      redirect_to @movie, notice: 'Movie was successfully updated.'
    else
      render action: "edit"
    end
  end

  # DELETE /movies/1
  def destroy
    @movie = Movie.find(params[:id])
    @movie.destroy
    redirect_to movies_url
  end
end
```
